Some People are Developmentally Retarded and Some People Have JOBS!!! Some People Have Passive and Residual Income form INTERWEBZ and Pay Zero Taxes or 10-30% not the 40-60% that other slaves in the NWO Zionist Maccabees Cult System DO………..

All 1000 scanned ports on localhost (127.0.0.1) are closed plus passwd root/usr. nmap -O is your half-assed OS scan Traceroute shows company shares on CFR. The Code of Federal Regulations is not be be confused with Foreign-Policy Council. Passwords set on all accounts passwd user su root and close ports. Disable Compilers. Mitigation, it gets in . folders in cd ~ , also Live DVDs/USBs are commonly used here. calculate /home/guest/Desktop # /etc/init.d/sshd stop sshd | * Stopping sshd ... [ok] calculate /home/guest/Desktop # rm /etc/init.d/sshd calculate /home/guest/Desktop # /etc/init.d/sshd start bash: /etc/init.d/sshd: No such file or directory calculate /home/guest/Desktop # nmap -O localhost && or ; echo The Hack me sign... An NSA official I saw in an interview was only using LIVE DVD's of Linux at the Library. WiFi gives your address so does the Ether, does not mater, it will always be Multi-Layered, No VPN or any FreednsZone or macchanger or log clearing in terminal will do well enough, many just Mitigate and go with HDD having no Track0 bootloader. Some literally Mitigate on RAM Disk, Live DVD/Live USB, or go with other Kernels e.g. Microkernel (Minix) Hybrid Kernel (BeOS or Haiku) Syllable OS, AROS, Plan 9, React OS, Even another Linux Variant with No Systemd such as Devuan or Calculate Gentoo Linux, They started going for Arch and Poorly Configured Slackware Builds, and Debian because it Merged with RHEL/Suse Enterprise so it had Systemd and maybe compilers that would not be a good thing, my passwords are set, ports are closed on nmap -O and Compilers are Uninstalled on Pale Moon not Firefox or Chrome or the Fork of it which does not even block the trackers, Block more trackers and the view count on YouTube Stops, Most Mitigate by deleting .Moonchild Productions and .mozilla in cd ~ then what I do is play ping localhost in tty1 or cat /dev/urandom | base64 and that makes it difficult. My Gentoo Linux is working Fine, What some people do is Mitigate, There is no Single Layered Option Period, Everything Tech is Multilayered, even the Commodore 64 had chip problems and people with the knowhow could do what we do now to BIOS ROMS and other firmware. Kollibri, FreeDOS, Gentoo has less of that Systemd crap also. List of known Kernels you even get the Sats in Space Missions such as Rodos / Embedded or another common one, they will even use Sigils AKA Alien Characters. I am disabled also so I go with Librebooting 80-40-20 dollar Laptops and Installing another NON-Proprietary OS/Kernel there are many even Rust/Lisp based re-

write the kernel from scratch was another proof of concept mentioned at Defcon. calculate /home/guest/Desktop # /etc/init.d/cupsd stop cupsd | * Caching service dependencies ... [ok] cupsd | * Stopping cupsd ... [ok] calculate /home/guest/Desktop # rm /etc/init.d/cupsd calculate /home/guest/Desktop # echo Jewtooth has to be disabled by the HW Switch same with WiFightit then boycott more Intel AMD ones for Stallman Libre Only HW eg IBM T6160X200X201400s I have MSI wind on Porteus and Gentoo Mitigated on RAM Ram is always the better option even core isolation is not gonna work because they could get to the HW and FW and other things such Virtualization and Embedded is what Business Enterprise Requires as well as a hospital Grade and ANSI... GE an evil company uses HeliOS a RHEL Back-Door. Healthcare is the Shadow Gov of Medical Cointel Pro abuse and terrible crap.
